

SOLARIS RESOURCES

Corporate Presentation
September 2026

Forward-Looking and Cautionary Statements

This presentation does not constitute an offering of securities and the information contained herein is subject to the information contained in the continuous disclosure documents of Solaris Resources Inc. ("Solaris" or the "Company"). No securities commission or other regulatory authority in Canada or any other country or jurisdiction has in any way passed on the merits of this presentation and no representation or warranty is made by Solaris to that effect. The information in this presentation is not intended to modify, qualify, supplement or amend information disclosed under corporate and securities legislation of any jurisdiction applicable to Solaris and should not be used for the purpose of making investment decisions concerning securities of Solaris. All amounts expressed in Canadian dollars unless otherwise stipulated.

Forward-looking Statements

This presentation includes certain statements that constitute "forward-looking statements", and "forward-looking information" within the meaning of applicable securities laws (collectively, "forward-looking statements"). All statements, other than statements of historical fact, are forward-looking statements. These statements appear in a number of places in this presentation and include statements made with respect to anticipated exploration and development activities. When used in this presentation, words such as "intends", "expects", "will be", "underway", "targeted", "planned", "objective", "expected", "potential", "continue", "estimated", "would", "subject to" and similar expressions are intended to identify these forward-looking statements. Forward-looking statements in this presentation include, but are not limited to: the Company's anticipated exploration and business plans; timing and completion of future activities of Solaris; expected life of mine; use of capital; the impacts and benefits of the Warintza Project; the timing and amount of estimated future production, if any; achievement of certain metrics compared to the Company's peer group; future updates to the mineral resource and mineral reserve estimates of the Warintza Project; the completion of resource drilling; all prospective information in the pre-feasibility study, licensing and permitting at the Warintza Project; the technical approval of an Environmental Impact Assessment; the commencement of the Free, Prior and Informed Consultation process and the outcome thereof; the Company's entrance into an exploitation agreement; and fluctuations in copper prices, supply and demand. Estimates of mineral reserves and mineral resources are also forward-looking statements because they incorporate estimates of future developments including future mineral prices, costs and expenses and the amount of minerals that will be encountered if a property is developed.

Although Solaris believes that the expectations reflected in such forward-looking statements are reasonable, undue reliance should not be placed on forward-looking statements since the Company can give no assurance that such expectations will prove to be correct. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements, including risks related to the business of the Company; global outbreaks and contagious diseases; business and economic conditions in the mining industry generally; the supply and demand for labour and other project inputs; adverse claims made by local communities; changes in commodity prices; unanticipated exploration and development challenges (including failure of equipment or processes to operate in accordance with specifications or expectations, cost escalation, unavailability of materials and equipment, government action or delays in the receipt of government approvals, industrial disturbances or other job action, and unanticipated events related to health, safety and environmental matters); adverse weather conditions; political risk and social unrest; changes in interest and currency exchange rates; and the risks, uncertainties and other factors identified in the Company's periodic filings with Canadian securities regulators. These forward-looking statements were derived using numerous assumptions, including assumptions regarding

general business and economic conditions; the Company's ability to develop and maintain relationships with local communities (including the local Shuar Centres of Warints and Yawi); commodity prices; anticipated costs and expenditures; the Company's ability to advance exploration efforts at the Warintza Project and its other projects; the receipt of any necessary permits, licenses, social licenses and regulatory approvals in connection with the future development of Solaris' projects in a timely manner; the availability of financing on suitable terms for the development and continued operation of Solaris' projects; Solaris' ability to comply with environmental, health and safety laws; the assumptions underlying mineral resource and mineral reserve estimates and the realization of such estimates; and the results of exploration efforts. While the Company considers these assumptions to be reasonable based on information currently available, they may prove to be incorrect. Forward-looking statements speak only as of the date those statements are made. Except as required by applicable law, we assume no obligation to update or to publicly announce the results of any change to any forward-looking statement contained herein to reflect actual results, future events or developments, changes in assumptions or changes in other factors affecting the forward-looking statements. If we update any forward-looking statements, no inference should be drawn that we will make additional updates with respect to other forward-looking statements. All forward-looking statements contained in this presentation are expressly qualified in their entirety by this cautionary statement.

Technical Information

The technical information contained in this document was approved by, or based upon disclosure prepared by Mr. Nicholas Szebor, EurGeol, CGeol, Director and Global Lead – Geosciences at AMC Consultants, who supervised and approved the Mineral Resource Estimate and Mr. Roderick Carlson, FAIG (RPGeo), MAusIMM, Technical Lead – Geosciences at AMC Consultants who is responsible for the exploration, drilling, sample preparation, and assays. The preparation of the Mineral Reserve Estimate and mining aspects of the PFS was supervised and approved by Mr. Eugene Tucker, P.Eng., Director and Global Lead – Open Pit Mining at AMC Consultants. The costs (excluding process plant and site services) and economics of the PFS were prepared under the supervision of Ms. Mary Alejo Hito, P.Eng., Principal Mining Engineer at AMC Consultants. The preparation of the metallurgy, processing, and site infrastructure aspects (excluding TMF, WRF, and water management) of the PFS was supervised by Mr. Greg Lane, FAusIMM, Principal Consultant at Ausenco. Mr. Guillermo Hernán Barreda Flores, SME Registered Member, Regional Manager at Knight Piésold, prepared the TMF, WRF, and site water management aspects of the PFS. Each of the aforementioned individuals are a "Qualified Person" as defined in National Instrument 43-101 – Standards of Disclosure for Mineral Projects ("NI 43-101").

This technical information contained in this presentation has been extracted from Solaris' press release entitled "Solaris publishes positive pre-feasibility study results and maiden mineral reserve for the Warintza project, with significant mineral resource increase, an extensive mine life, and US\$4.6bn NPV" dated 6th of November 2025, a copy of which is available on SEDAR+ under the Company's profile at www.sedarplus.ca and EDGAR at www.sec.gov/edgar. The remaining technical information contained in this document has been reviewed and approved by Jorge Fierro, M.Sc., DIC, PG, an independent consultant who is a "Qualified Person" as defined in NI 43-101. Jorge Fierro is a Registered Professional Geologist through the SME (registered member #4279075).

Forward-Looking and Cautionary Statements

Cautionary Note Regarding Non-IFRS Measures

This presentation refers to various non-IFRS measures, such as “all-in sustaining costs” or “AISC”. These measures do not have any standardized meaning prescribed by the International Accounting Standards Board and are therefore unlikely to be comparable to similar measures presented by other companies. The non-IFRS measures are permitted by National Instrument 52-112 – Non-GAAP and Other Financial Measures Disclosure and are intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

Cautionary Note to U.S. Investors Concerning Estimates of Mineral Resources

The mineral resource and mineral reserve estimates described in this presentation have been prepared in accordance with the requirements of Canadian securities laws, which differ from the requirements of U.S. securities laws. The terms “mineral resource”, “measured mineral resource”, “indicated mineral resource” and “inferred mineral resource” are defined in accordance with NI 43-101 and the Canadian Institute of Mining, Metallurgy and Petroleum (the “CIM”) – CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as amended. These definitions differ from the definitions in requirements under United States securities laws adopted by the United States Securities and Exchange Commission (the “SEC”). Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. Investors are cautioned not to assume that all or any part of an inferred mineral resource exists or is economically or legally mineable. An “inferred mineral resource” is that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity. An inferred mineral resource has a lower level of confidence than that applying to an indicated mineral resource and must not be converted to a mineral reserve. It is reasonably expected that most inferred mineral resources could be upgraded to indicated mineral resources with continued exploration. Investors are cautioned not to assume that all or any part of mineral resources determined in accordance with NI 43-101 and CIM standards will qualify as, or be identical to, mineral resources estimated under the standards of the SEC applicable to U.S. companies. Accordingly, information contained in this presentation may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder.

Statutory Rights of Action

Securities legislation in certain of the provinces of Canada may deem this presentation to be an offering memorandum and, accordingly, provide purchasers with statutory rights of rescission or damages, or both, in the event this presentation contains a misrepresentation. Where used herein, “misrepresentation” means an untrue statement of a material fact or an omission to state a material fact that is required to be stated or that is necessary to make any statement not misleading in light of the circumstances in which it was made. These remedies, or notice with respect to these remedies, must be exercised or delivered, as the case may be, by the purchaser within the time limits prescribed by applicable securities legislation. The following summary is subject to the express provisions of the applicable securities laws, regulations and rules, and reference is made thereto for the complete text of such provisions. Such provisions may contain limitations and statutory defenses not described herein on which the Company and other applicable parties may rely. Purchasers should refer to the

applicable provisions of the securities legislation of their province for the particulars of these rights or consult with a legal adviser.

The following is a summary of rights of rescission or damages, or both, generally available to purchasers resident in the provinces of Ontario, New Brunswick, Nova Scotia and Saskatchewan. If there is a misrepresentation herein and you are a purchaser under securities legislation in Ontario, New Brunswick, Nova Scotia and Saskatchewan you may have, without regard to whether you relied upon the misrepresentation, a statutory right of action for damages, or while still the owner of the securities, for rescission against the Company. This statutory right of action is subject to the following: (a) if you elect to exercise the right of action for rescission, you will have no right of action for damages against the Company; (b) except with respect to purchasers resident in Nova Scotia, no action shall be commenced to enforce a right of action for rescission after 180 days from the date of the transaction that gave rise to the cause of action; (c) no action shall be commenced to enforce a right of action for damages after the earlier of (i) 180 days (with respect to purchasers resident in Ontario) or one year (with respect to purchasers resident in Saskatchewan and New Brunswick) after you first had knowledge of the facts giving rise to the cause of action and (ii) three years (with respect to purchasers resident in Ontario) or six years (with respect to purchasers resident in Saskatchewan and New Brunswick) after the date of the transaction that gave rise to the cause of action; (d) with respect to purchasers resident in Nova Scotia, no action shall be commenced to enforce a right of action for rescission or damages after 120 days from the date on which payment for the securities was made by you; (e) the Company will not be liable if it proves that you purchased the securities with knowledge of the misrepresentation; (f) in the case of an action for damages, the Company will not be liable for all or any portion of the damages that it proves do not represent the depreciation in value of the securities as a result of the misrepresentations; and (g) in no case will the amount recoverable in such action exceed the price at which the securities were sold to you. The foregoing is a summary only and is subject to the express provisions of the Securities Act (Ontario), the Securities Act (New Brunswick), the Securities Act (Nova Scotia) and the Securities Act (Saskatchewan), and the rules, regulations and other instruments thereunder, and reference is made to the complete text of such provisions contained therein. Such provisions may contain limitations and statutory defenses on which the Company may rely.

Notwithstanding that the Securities Act (British Columbia), the Securities Act (Alberta), and the Securities Act (Québec) do not provide, or require the Company to provide, to purchasers resident in these jurisdictions any rights of action in circumstances where this presentation or an amendment hereto contains a misrepresentation, the Company hereby grants to such purchasers contractual rights of action that are equivalent to the statutory rights of action set forth above with respect to purchasers resident in Ontario.

In Manitoba, the Securities Act (Manitoba), in Newfoundland and Labrador, the Securities Act (Newfoundland and Labrador), in Prince Edward Island, the Securities Act (PEI), in Yukon, the Securities Act (Yukon), in Nunavut, the Securities Act (Nunavut) and in the Northwest Territories, the Securities Act (Northwest Territories) provide a statutory right of action for damages or rescission to purchasers resident in Manitoba, Newfoundland and Labrador, PEI, Yukon, Nunavut and Northwest Territories respectively, in circumstances where this presentation or an amendment hereto contains a misrepresentation, which rights are similar, but not identical, to the rights available to Ontario purchasers.

The statutory right of action described above is in addition to and without derogation from any other right or remedy at law.

Solaris Investment Case

PFS confirms Warintza's Tier 1 status

Global scale resource with multi-decade mine life and first quartile costs driving significant EBITDA and FCF

District scale potential with exploration upside and no attachment to a major

One of the few copper projects globally with multigenerational scale without an attachment to a major

Operational simplicity

Conventional open pit mining methods at low elevation and leveraging conventional processing plant

Social license to operate and favourable mining jurisdictions

Impact & Benefits Agreement signed along with Municipal, Provincial and Federal government endorsements

Early-stage Latam exploration portfolio offering unrecognised upside

Focus of unlocking value through derisking activities

Experienced team

Diverse skillsets covering all critical elements required at this stage of Solaris' development

Fully funded to complete Warintza feasibility study & value accretive actions

US\$200 mm financing package with Royal Gold in May 2025

Value Catalysts Driving a Step-Change Re-Rating

Unlocking the near-term value levers is a priority

SOLARIS
RESOURCES

Warintza Project De-Risking (Ecuador)

- Globally significant near-term project
- Expect to be fully permitted by 1H 2027
- Feasibility Study ongoing
- Final Investment Decision expected in 2027

District Consolidation Strategy

- Significant greenfield opportunities at Warintza
- Untested targets within adjacent optioned properties
- Social license obtained with significant fieldwork
- Advancing regional hub consolidation strategy

Latam Exploration Portfolio

- David Lowell targets in Peru & Chile
- Adjacent to existing operations
- Joint Venture with Teck at La Verde in Mexico
- Unlocking value through permitting & exploration
- All project located close to existing infrastructure

Resilient Copper Market

- Flat to declining mine output (lower grades & increased operational complexity)
- Operational disruptions with tight concentrate market
- +800ktpa Cu replenishment requirement
- China concentrate imports accelerating (-ve TC/RC)
- Resilient demand - electrification, urbanisation, infrastructure

PFS Highlights

Confirms Warintza's Status as a Tier 1 Project

SOLARIS
RESOURCES

Key Features of Warintza

✓ 312% increase in M&I Mineral Resources compared to the 2024 MRE

✓ Downhill loaded haul from pit drives 1st quartile costs

✓ Excellent access to infrastructure (water, power, roads, labour, etc)

✓ Clean high-quality concentrate providing marketing flexibility

✓ Significant potential to extend LOM by 25 to 30 years beyond Reserves

✓ PFS prepared in conjunction with highly experienced consultants

Average Annual Copper Equivalent Production (ktpa)⁽¹⁾⁽²⁾

Average Annual Copper Equivalent Production (kt)

Low Capital Intensity

Highly attractive capital intensity relative to peers and industry leaders

Key Drivers of Warintza's Low Capital Intensity

- ✓ Substantial existing infrastructure
- ✓ Low average elevation of 1200m
- ✓ Fresh water available
- ✓ Low-cost operating inputs
- ✓ Minimal pre-stripping capex
- ✓ Conventional concentrator plant
- ✓ Simple open pit mining method

Capital Intensity Benchmarking (US\$/t CuEq)

Source: Wood Mackenzie, Technical Reports, Warintza PFS Model, public filings

1. Capital Intensity calculated as Initial Capex / Avg Annual CuEq. Produced for first 15 years
2. Weighted average capital intensity of organic brownfield and greenfield growth projects as per 2024 Annual Report (published March 2025)
3. Represents the median capital intensity (Initial Capex / Avg Annual CuEq. Production) of copper development projects that are forecast to produce >200ktpa CuEq
4. Average mid-point capital intensity of BHP's Chilean organic growth projects as published in their February 2025 corporate presentation

Low Strip Ratio

Warintza boasts one of the highest strip-adjusted grades of any copper development project globally

Advantage of close to surface ore body

✓ Minimal waste removal significantly reduces costs

✓ High grade at surface

✓ Optimization opportunities for mine planning

✓ Reduces the mine's physical footprint

✓ Lower truck hours which reduces carbon footprint

Strip-Adjusted Grade Benchmarking⁽¹⁾

Source: Wood Mackenzie, Technical Reports, Warintza PFS Model

1. Excludes underground projects and projects with LOM average copper equivalent production < 100 ktpa

2. Strip adjusted grade calculated as: Contained Copper / Total Material Moved

Technical simplicity

Environmentally Encapsulated

SOLARIS
RESOURCES

Technical simplicity

- Conventional open pit mining methods
- Conventional processing equipment
- Operating at low elevation
- Available fresh water
- Substantial existing infrastructure
- Clean high-quality concentrate providing strategic marketing flexibility
- PFS prepared in conjunction with Ausenco, Knight Piesold & AMC

Environmentally encapsulated

- Footprint encapsulated by the north, west and south ridge line
- Small and compact footprint
- Water flows downstream from Southwest to Northeast

Social License to operate

Favourable Mining Jurisdiction

SOLARIS
RESOURCES

Partnerships signed with all Indigenous organisations in the area of influence

Community Life Plans approved following proactive engagement

Senior Management Team

Diverse skillsets covering all critical elements required at this stage of Solaris' development

Matthew Rowlinson
President & CEO

Extensive leadership experience across operations, M&A, and portfolio management, supported by a deep understanding of the global copper market. Matthew previously held senior executive roles within Glencore's Copper Department, most recently serving as Head of Copper Business Development, where he was jointly responsible for the strategic direction and growth of one of the world's largest copper portfolios.

Richard Hughes
CFO

Over 20 years of experience in the natural resources sector, most recently as CFO & Executive Director of Trident Royalties PLC until its acquisition in late 2024. Prior to joining Trident, he was a senior member of the Metals and Mining Investment Banking team at RBC Capital Markets.

Javier Toro
COO

A Mining Engineer with over 25 years of experience leading the design and execution of engineering and economic studies for global scale open pit copper projects in the Americas. Prior to joining Solaris in January 2024, Mr. Toro worked with Hudbay Minerals for over 11 years, most recently as Vice President, Mining Technical Services.

Walter Garcia
VP Government Affairs

Over 15 years of experience in environmental policy, sustainable development, and regulatory affairs across the public and private sectors. Walter was appointed Minister of Environment of Ecuador in 2016 where he led major conservation and climate initiatives. Most recently, Walter served as Government Affairs Manager in the Ecuadorian Oil & Gas sector.

Ricardo Obando
VP Community & Govt affairs

An expert in the field of government and community social relations with a specialty in the formulation and design of dialogue and consultation processes. Prior to joining Solairs in 2019, Ricardo held senior roles in the Ecuadorian public sector, including Advisor to the Ministry of Energy & Mines and Strategic Coordinator of Social Intervention of the Ministry of Strategic Sectors.

Patrick Chambers
VP Business Development & Investor Relations

Metals and mining professional with a strong track record across a broad range of commodities, with a particular focus on Latin America. Patrick began his career as a geologist with Fresnillo in Mexico before moving into corporate finance and subsequently investor relations, combining technical insight with financial and strategic expertise.

Diverse skillsets covering all critical elements required at this stage of development

Proven track record of success in mining projects

Extensive operational experience in Latin America

Expertise in corporate structuring and financing

Compelling Valuation

Solaris trades at a meaningful discount to peers and broker target prices, offering strong re-rating potential
